About US

We are driven through . . . . . .

INNOVATION
PURPOSE
JOY

Across our design, digital, and IT departments, we blend our capabilities to engineer possibilities. Turning ideas into everyday business practice, so your business performs better.

Fueled by the desire to make a lasting impact, we create experiences that change the way people interact with businesses – and with each other. We challenge status to improve the way people live and work.

We are creators.
We are artists and strategists.
We are developers, designers and project managers.
We are passionate and loyal.
We are inspired.

diversity

Is Our Greatest Strength

We deliver strategies that amplify your business reach, breed, customer loyalty-and boost your bottom line.

OUR Clients

"Here are some featured clients we are happy to partner with and help build their businesses"

and counting......

OUR Services

With deep understanding of modern technology and strong expertise in multiple business domains, we implement comprehensive projects and deliver high-end web, mobile and ERP solutions.

We develop custom software products tailored to specific business needs of our clients and support them throughout the whole way: from an idea to its implementation. Our solid background, flexibility and full transparency enabled us to become a trusted technological partner for our clients.

Sinnovation is synonymous with top quality and high-end tech products & services.

DEVELOPMENT PROCESS

OUR PROCESS
At **Sinnovation**, we start by exploring the primary challenges for your business or industry to develop cutting-edge solutions through a strategic process where we will discover, plan, build, and launch a custom-tailored brand experience to grow your business.

Discovering the path before embarking the journey.
PLAN

We organize the tasks, and schedules and setting up your project management tools. The idea is to plan tasks using the user story process from the agile methodology.
CODE

Here our developers does code development and code review.
When the code is ready, they merge it.
BUILD

This step is the first one toward automation. Our goal here is to build the source code into one desired format, compiling, testing, and deploying in a particular place of the infrastructure.

TEST & QA

The continuous testing process reduces risks. Automatic tests ensure that no bugs will be implemented in production. We implement testing tools in our workflow to ensure the best development quality for your software.
RELEASE

If our code has passed the testing (continuous integration) process and is ready to be deployed.
DEPLOY

Our operational team is deploying the new feature in production. But as automation it is one of our principles, it is necessary to set up continuous deployment.
OPERATE/CONFIGURE

We maintain a scalable infrastructure, infrastructure as code, and check security issues and log management.
MONITOR

Monitoring is an important step as it allows you to fix incidents
faster and create a better experience for your end–user.
